

# Ek Archery – on target for 2017

Dutch-based archery company Ek Archery Research is looking ahead to strong sales this year with the introduction of two new 'Pro' crossbows.

Ek Archery Research continues to refine its line of crossbows with another generation of enhancements.

The Jaguar II has evolved to become the Jag II Pro and now features a pre-strung bow, allowing for hassle-free assembly. It is also equipped with vibration reducing string stoppers, which makes it even quieter and more durable. Its new ergonomic pistol grip gives the user a comfortable

hold and stabilises the operator's ability to acquire the target with the Jag II Pro's tactical red-dot sight.

The barrel features a patented aluminium rail and anti-dry-fire trigger mechanism, giving this crossbow everything the user could want in a compact and easy to use package.

This crossbow will put holes through a bull's-eye without putting a hole in your pocket.

The Guillotine M Pro is a crossbow that the enthusiast would be drawn towards. Expanding on the stable frame of the original high-velocity Guillotine M, the new upgraded edition emphasises on stealth, with string stoppers and silencers. The reduction in vibration results in a hand-shock that is minimal and a sound signature that is sure to impress retailers and consumers alike.

High-end machined cams, a bull-pup-style trigger mechanism and a strengthened anti-dry-fire safety system make the M Pro a very solid and consistent shooting platform.

The Guillotine M Pro is the machine that lives up to its name – sharp and reliable.
